

Tran Xuan Quang

Software Engineer

Address: Ho Chi Minh City | Mobile: +84 908139582 | Email: tranxuanquang79@gmail.com

LinkedIn: <https://www.linkedin.com/in/quang-tran-395492272/>

PERSONAL PROFILE

Software Engineer with 2+ years of experience building scalable, production-ready web systems using Node.js, TypeScript, and React. Experienced in designing distributed workflows, optimizing database performance, and deploying containerized systems on GCP. Strong in architecture, system performance optimization, and collaborative agile development. My problem-solving abilities and teamwork have been recognized by my past team members

EDUCATION

Ho Chi Minh University of Science

Ho Chi Minh City, Viet Nam

- **Bachelor of Information Degree**

2020 - 2024

- Major: Software Engineer
- GPA: 3.2/4

Certification

Ho Chi Minh City, Viet Nam

- **Test of English for International Communication (TOEIC)**

- Reading & Listening: 900/990
- Writing & Speaking: 310/400

TECHNICAL SKILLS

- **Languages:** English (Fluent Communication)
- **Programming Languages:** C++, JavaScript, TypeScript, SQL
- **Backend:** Node.js (NestJS), REST APIs, WebSocket, BullMQ, Message Queues
- **Frontend:** HTML, CSS, ReactJS, NextJS, VueJS, TailwindCSS, Bootstrap
- **Database:** MongoDB, PostgreSQL, MySQL, redis
- **Cloud:** Microsoft Azure, GCP
- **Tools:** Git, Docker, Coolify, Figma
- **Others:** Proficient English communication, Teamwork
- **Soft skills:** Communication skill, Critical thinking, Problem Solving

WORK EXPERIENCE

Consortia Group

Ho Chi Minh City

Fullstack Developer

September 2024 – March 2026

Developed customized web solutions for clients – including AI images/video generate website, internal management systems, and on-demand web applications - primarily through outsourcing projects.

- Lead project Vizera AI Images/videos generation ([Link](#)) for vizera.ai ([Link](#))
 - **Project description:** Vizera AI is a Swiss AI architecture visualization software and web platform built for professional architects, interior designers and real estate teams. Able to turn sketches, CAD plans and 3D models into clear, convincing presentation images and competition visuals.
 - **Technologies:** Reactjs, NestJS, SocketIO, BullMQ, Sequelize, Prisma, GCP, Docker, Redis
 - **Role:** Fullstack developer (Lead)
 - **Responsibilities:**
 - **Redesigned** the database schema, **refactored**, and **enhanced** existing core modules
 - **Optimized** database queries and APIs for image/video display, reducing loading time by 50%.
 - Implemented a **message queue** workflow using **BullMQ** for image/video generation tasks, enabling concurrent task processing and increasing overall performance by 30%.
 - Implemented an **interactive canvas editor** that allows users to directly modify images based on their requirements.

- Implemented a payment flow using **Stripe**, including **price** display, **invoice history** management, and **subscription** handling.
- Designed **asynchronous webhook processing pipeline** to handle AI provider callbacks reliably and prevent duplicate result processing.
- Integrated and worked with **AI image/video generation provider** APIs (Flux, bacGemini, GPT, Kling, VEO, ...) using webhooks, then processed and transformed the results for UI display.
- Set up containerized deployment using Docker and successfully deployed the application to **Google Cloud Platform (GCP)**. Utilized **Google Cloud Storage (GCS)** for storing images and videos.
- **Mentored** a new team member, helping them onboard quickly and contribute to feature implementation, ensuring **timely delivery** of project milestones.
- Contributed to project **Arch app** for **The outsourcing agency** ([link](#))
 - **Project description:** An ERP and administration web platform for an architecture company, supporting internal operations management across multiple business areas
 - **Technologies:** VueJS 2, Bootstrap, NestJS, PostgreSQL, Docker, Coolify
 - **Role:** Fullstack developer
 - **Responsibilities:**
 - Contributed to database schema, architect redesign while refactoring and enhancing core modules
 - Standardized deployments using **Docker** and **Docker Compose** for services across staging and production
 - Implemented **PDF** export functionality for the Report module using **jsPDF**, preserving document quality, improving export performance by over 50%, and reducing **Docker image** size by 30% by removing unnecessary dependencies
 - Resolved critical & non-critical issues, coordinated closely with clients, and collaborated with team members to maintain project progress and ensure on-time delivery

PROJECTS

Capstone Project – ITViec Clone Website

Fullstack Developer

HCM University of Science

January 2024 – April 2024

This is a job search platform focused on technology-related roles. It provides a platform for both job seekers and employers in the tech industry to connect and find suitable matches

- Techs: NextJS, RESTful, PostgreSQL, NodeJS, Kafka, Elastic Search, Docker, AWS(EKS), Keycloak, gRPC
- Team size: 9
- Roles:
 - Designing Proof of Concept, Prototype, Architecture, Domain Model, Product Backlog
 - Designed and integrated user interface o Developed CRUD APIs
 - Developed CRUD APIs
- Git: <https://github.com/HQDuy47/capstone-project>

Advanced Web Development Project – ZenClass

Backend Developer

HCM University of Science

September 2023 – December 2023

Zenclass is an innovative online learning platform designed to streamline the educational experience for both educators and students.

- Techs: ReactJS, NodeJS, RESTful API, MongoDB, Docker, Google Analytics
- Team size: 3
- Roles:
 - Designing Database, Hosting Website
 - Designed and integrated user interface
 - Developed CRUD APIs
- Git: <https://github.com/txquang2202/ZenClass>
- Host URL: <https://zen-class-fe-final.vercel.app/>
